

6- Economic Impact of Ismael Quesada.

Ismael Quesada is a family company with more than 60 years in the market. It is mainly engaged in the marketing of chemicals for the rubber and adhesives sector. Its business model is to supply chemicals manufactured by third parties to downstream customers, i.e. companies that use these chemicals to manufacture other products.

Since its foundation, the company has been based in Partida Altabix 1-215, in the city of Elche. In addition, it has an additional warehouse in the El Sequero Industrial Area (La Rioja), which allows to provide proximity services to other areas of the national territory.

Regarding the **customers** of Ismael Quesada, it is important to emphasize that these are **exclusively companies, distributed mostly throughout the Spanish territory**, although a small part of the products is also marketed in other countries of Europe and North Africa.

The tables below allow us to understand the economic impact of the company on its environment and society.

Generated Economic Value (euros)

The Economic Value Generated, indicative of the company's turnover, shows a solid evolution in the last three years, in which there have been notable interannual growth that go beyond the growth related to the increase in energy and raw material prices that has characterized recent times. **No financial aid received from the government.**

■ Distributed Economic Value (euros)

Year	Distributed Economic Value (VED)	Operative Costs	Wages and Benefits	Payments to Capital Providers	Payments to Governments
					
2020	5.688.109	5.218.016	425.506	4.898	39.689
2021	9.635.936	8.803.693	585.746	6.516	239.981
2022	13.684.696	12.725.075	655.888	34.867	268.865

As a result of the increase in turnover, the Distributed Economic Value has increased significantly in 2022, which has resulted not only in an increase in operating expenses, but also in greater spending on salaries and benefits, in capital suppliers and also in an increase in taxes paid by the company.

■ Retained Economic Value (euros)

105.317
2020

749.113
2021

793.109
2022

The Retained Economic Value, resulting from the difference between the Generated Economic Value and the Distributed Economic Value, has increased significantly since 2020. **In 2022, the growth compared to 2021 has been 43,996 euros.**

An analysis of environmental, social and corporate governance risks is conducted in which climate change has not been assessed, beyond the impact on all citizens and productive sectors, as a generator of significant risks or opportunities.
