

1- Presentation.

The year 2022 will probably be remembered as the year in which the biggest global health crisis, caused by COVID-19, gradually faded until it practically disappeared from the agenda.

After two years of intense economic and social tensions as consequence of mobility restrictions in all terms, the World recuperation took the protagonist and the stimulation politics made by the community authorities are structured around the green transition, profiling a model of development which combines with a dynamic and solvent economy aligned with environmental and social sustainability.

In the Spanish side, the recuperation, transformation and resilience plan, identifies eight arms, some of them especially relevant for its transcendancy and which we must bear in consideration, as they are the just and inclusive energetic transition, resilience infrastructures and ecosystems, digitalization of the industrial and PYME's network.

Despite the uncertainties, for Ismael Quesada, 2022 has been a positive exercise in its economic results, with a notable increase in turnover that confirms the success of its strategic decisions.

In terms of sustainability, progress has followed the line marked in previous exercises. The challenge of achieving Net Zero Carbon Emissions by 2030 remains and is closer.

The company's performance in all aspects of sustainability has once again been audited by Ecovadis, which has awarded with a silver medal certification that recognizes an advanced, consolidated and sustained management level.

Ismael Quesada, its value chain and all its stakeholders progress by sharing and adding value on the path to sustainability.

Thank you for being part of this dream.

Cristina Quesada,
General Manager.
